## Keys

You can use the buttons to set which notes may and may not appear in your scale.

**Red (blocked):** This note will not be played.

**Green (active):** This note is played.

## Snap Modes

This allows you to set what happens if you play a note that does not occur in the scale you have set.

- **Auto:** Automatically plays the nearest lower or highest note that is active.
- **Lowest Note:** Plays the nearest lowest note that is active.
- **Highest Note:** Plays the nearest highest note that is active.
- **Off:** Only plays the notes that are active, all other notes are blocked.

## Export Button

This allows you to export the scale as a ReaScale format to use it in Reaper without the plugin.

e.g. in the MIDI Piano Roll when Key Snap is active.

## Panic! Button

In case it should happen that midi notes get stuck, you can press this button to stop the notes.

To do this, press the button and then send a NoteOn command to the plugin, e.g. by pressing a key on your MIDI controller.

## UI Zoom Factor

Here you can select how large the plugin window should be displayed on your screen
